## Corn Headers

*L03 / LH3*

# Unrivaled.

**Simple Design. Solid Construction.  
High Performance.**

Every farmer knows the importance of good timing. Costly breakdowns and the resulting delays, especially during harvest, can hurt your bottom line.

Fantini corn headers ease the pressure because they are built to keep performing harvest after harvest. A high-strength welded frame is designed to keep weight as close to the combine as possible. Simple, high efficiency, low-maintenance PTO-driven gearboxes eliminate slippage and power loss as they provide outstanding performance even in the most trying conditions. The result of this rugged construction is an incredibly low cost of ownership.

Our superior engineering is backed by an extensive dealer network and the Fantini North American team, located in the heart of North Dakota farm country. Whether you need to tap into our wealth of knowledge or full stock of parts and accessories, we're always here to help.

Taking advantage of small windows of opportunity is essential to farming success. With a Fantini on your side, time will be, too.

## ***Uncompromising.***

---

**Our combine headers possess qualities that can be seen on and off the field.**

**Technologically sophisticated, yet elegantly simple, they perform and excel where others cannot. Sturdy construction and common-sense features have been developed based on farmer input and honed through years of experience.**

**With minimal breakdowns, minimal downtime and minimal overall maintenance, Fantini headers serve up higher efficiency, greater productivity and lower cost of ownership.**

# L03

## Rigid Corn Header

**Efficient, reliable and robust, the Fantini L03 can easily fit any variety of combine.** Designed with a farmer's livelihood in mind, it's packed with features that maximize harvest by minimizing the shatter loss that is so common with competitor headers. The L03 is equipped with harvesting rollers boasting stalk roller spirals, adjustable knives, conical side augers, and more – all of which help optimize crop flow and maximize yield potential, while limiting the likelihood for costly downtime.

# LH3

## Folding Corn Header

**Offering the same premium features and benefits of our fixed models, the Fantini LH3 corn header is foldable for convenience and functionality.**

In the folded position, the LH3 is highly maneuverable and makes field-to-field transport much easier. And because no extra vehicles are needed to move the header, it reduces labor requirements when going from place to place. With features that greatly reduce shatter loss, the LH3 delivers outstanding crop flow and is compatible with any combine.

## Features

**Row Unit Gear Boxes** are made of cast iron and feature oil-immersed safety clutches that ensure excellent component protection for exceptional durability and safety.

An easily adjustable **Gathering Chain Front Sprocket** ensures optimal reliability in all working conditions.

The **Stalk Roll Spirals** are designed with efficient stalk gathering in mind, even in down corn.

**Drivelines** on each side consist of gear boxes and PTO shafts to ensure complete reliability during harvest and no downtime due to damaged chains.

**Single Piece Row Units** are clamped to a rigid frame for strength, reliability and easy maintenance.

Optional **Removable Stalk Choppers** feature wide diameter steel discs with tungsten carbide edged knives. Mounted in a central rear position and connected directly to the harvesting drive gearbox, it can be added to existing headers and doesn't require a new drive system. And when not needed, the choppers can simply be turned off.

Eight sharp, heat-treated **Stalk Roll Knives** per row pull all sizes of stalks through the row unit to ensure the ear is removed cleanly.

## Additional Features and Accessories

- **In-Cab Hydraulic or electric deck plate adjustment** with easy-to-read clearance indicator.
- **Adjustable Combine Adapter** that gives three different harvesting angles to suit all conditions.

- **Conical Side Augers** with a simple belt-drive design offers exceptional performance in down corn.
- **Maintenance-Free Poly Row Unit Covers** with extra-low profile for smoother crop flow, particularly in down corn. Available in 20-inch to 40-inch row spacing.

## L03

MODEL	Row Widths	Number of Rows
Rigid L03	20 and 22 in.	8, 12, 16, 18
	30 in.	4, 6, 8, 12, 16
	36, 38, and 40 in.	6, 8, 12

## LH3

MODEL	Row Widths	Number of Rows
Folding LH3	30 to 40 in.	8, 12
